

Antarctica is the world's southernmost, highest, driest, and coldest continent, covered almost entirely by a massive ice sheet that holds about 90% of the world's ice and 80% of its freshwater..

It has no native human population, but many countries operate scientific research stations there, which are primarily used during the summer months.

Antarctica is also the windiest continent, and its extreme cold has led to the coldest temperatures ever recorded on Earth.
